PROFESSIONAL SUMMARY

Computer Science undergraduate focused on Agentic AI, autonomous reasoning systems, and LLM orchestration. Built a LangGraph-based multi-agent research agent with Gemini embeddings, FAISS, PostgreSQL, Redis, and Docker. Experienced in Python, ML pipelines, scalable APIs, and LLM chatbot integration.

EDUCATION

Bachelor of Technology in Computer Science <i>Newton School of Technology, Rishihood University</i>	Aug. 2023 – May 2027 Grade: 8.07/10.0
Intermediate (Class XII) <i>Kaushalya World School</i>	2021 – 2022 Grade: 82.0%
Matriculation (Class X) <i>Kaushalya World School</i>	2019 – 2020 Grade: 94.83%

INTERNSHIPS

Software Developer Intern <i>Appbrew</i>	Aug 2025 – Mar 2026 Remote
– Designed 2 reusable themes adopted across 4+ production apps, reducing onboarding time by up to 80%. – Delivered 4 white-labeled mobile apps, reducing development time from 15 days to 2–3 days for brands including Swashaa, Meena Bazaar, Subtract, and Sage by Mala. – Refactored shared component library to remove duplicate code and standardize reusable UI blueprints across production apps.	
API Engineer Intern <i>30Sundays</i>	Jan 2025 – Jul 2025 Gurgaon, India
– Integrated 2 LLM-based chatbots for seller training and itinerary-based FAQs, improving internal productivity and knowledge access. – Engineered a scalable Node.js REST API for the Missed Activities PDF feature, reducing generation time by 60% and supporting 1K+ requests/day. – Owned end-to-end redesign of an internal itinerary builder, from requirements to deployment, used daily by 30+ operations and sales staff. – Built backend services for itinerary personalization, internal workflows, and travel package automation.	
Backend Engineer Intern <i>IIT Roorkee</i>	Jun 2024 – Aug 2024 Remote
– Built 11 concurrent web scrapers using Puppeteer and Node.js for large-scale automated data collection. – Automated data scraping workflows using Redis and Celery, reducing manual effort by 90%. – Optimized PostgreSQL queries using indexing, achieving response times as low as 5ms.	

PROJECTS

Crypto Alpha Research Agent <i>LangGraph, Gemini, FAISS, PostgreSQL, Redis, Docker</i> Github	Apr 2026
– Architected a 7-stage multi-agent pipeline using LangGraph that ingests live CoinGecko market data and autonomously generates sentiment, pattern, liquidity, risk, and ranking signals. – Designed agentic reasoning workflows to produce 10 ranked alpha opportunities per run with explainability logs for each decision stage. – Built semantic search over investment theses using 1536-dimensional Gemini embeddings and FAISS, enabling natural language queries across generated opportunities. – Deployed a Dockerized 6-service architecture with frontend, backend, PostgreSQL, Redis, worker, and beat services with fallback handling for CoinGecko and Gemini API rate limits.	
Carbs AI <i>TensorFlow, MobileNetV2, Python</i> Github	Nov 2025 – Dec 2025
– Built an AI-powered system using TensorFlow and MobileNetV2 to classify Indian dishes with 89% accuracy and estimate carbohydrate content from meal images.	

- Developed a regression model with MAE of 5.92g to predict net carbs and compute glycemic load for Type 1 diabetes support.
- Implemented an end-to-end ML pipeline including preprocessing, augmentation, training, evaluation, and prediction analysis.

Schedulix | *React, JavaScript, Framer Motion, CSS* | Github | Demo

Feb 2026 – Mar 2026

- Built an interactive CPU scheduling visualizer to help CS students understand OS algorithms including FCFS, SJF, SRTF, Round Robin, and MLFQ.
- Added real-time animations, Gantt charts, and performance metrics to visualize process execution, context switching, and scheduling trade-offs.

SKILLS

- Languages: Python, JavaScript, Java, SQL, HTML/CSS
- Agentic AI & LLMs: LangGraph, Autonomous Agents, Multi-Agent Pipelines, LLM Orchestration, Reasoning Workflows, Gemini Embeddings, FAISS, Semantic Search
- Machine Learning: TensorFlow, MobileNetV2, NumPy, Pandas, Matplotlib, ML Pipelines, Model Evaluation
- Backend & Databases: Node.js, Django, FastAPI, REST APIs, PostgreSQL, Redis, Celery
- Frontend & Mobile: React, React Native, Tailwind CSS
- Tools & Platforms: Docker, AWS, Git, GitHub Actions, Postman, CI/CD
- Core CS: Data Structures & Algorithms, OOP, Operating Systems, System Design

EXTRA-CURRICULAR ACTIVITIES

- Merged 7 PRs across sktime and SHAP, contributing fixes for forecasting workflows, plotting issues, async failure handling, and package maintenance tasks.
- Solved 250+ data structures and algorithms problems on LeetCode.
- Organized technical workshops for Neutron, the inaugural college fest, driving 20+ registrations.
